SUBMINIATURE PAPER CAPACITORS**Glass-to-Metal Sealed Tubulars****For Commercial and Military Applications**

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability over entire temperature range of -45°C to +125°C.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

TEMPERATURE RANGE
-65°C to +125°C**ASTRON CROSS-REFERENCE TABLE TO MIL-C-25**

ASTRON TYPE	MIL TYPE	DESCRIPTION	
TQF	CPO4	Uninsulated Body	INSERTED TAB CONSTRUCTION Capacitors with inserted tab construction are ideal for minimum size consideration. They are the smallest paper-foil capacitors available, the most compact units for operation over a wide temperature range to 125°C. without derating and can be used in AC as well as DC applications. Where smallest possible capacitor sizes are required, coupled with maximum capacitance stability and high insulation resistance over a wide temperature range, inserted tab construction is best suited for the application.
TQFP	CPO5	Insulated Body	
AQF	CPO8	Uninsulated Body	EXTENDED FOIL CONSTRUCTION Capacitors with extended foil construction are ideal where long life, excellent capacitance-temperature stability, high insulation resistance and small size, coupled with outstanding electrical characteristics over a wide temperature range, are required. They can be used in AC as well as DC applications. The extended foil non-inductive construction offers the lowest possible resonant losses in both low and high voltage applications.

ASTRON METALITE® HY-MET**TYPE MVL**

FEATURING 50 VDC RATINGS

**PLASTIC CASED TUBULAR METALLIZED PAPER CAPACITORS**

ASTRON Type MVL are axial lead, tubular type metallized paper capacitors contained in plastic tubes with an epoxy end fill to provide maximum moisture resistance. They are free of the usual wax coating and therefore are ideal for potting in plastic resins. The capacitor sections are impregnated in a solid thermostetting plastic which allows operation at temperatures up to 100°C.

Type MVL Capacitors replace ASTRON discontinued types ML and MLL Metallized Paper Tubulars.

TEMPERATURE RANGE -30°C to +100°C

With Voltage Derating

ASTRON Type XPR Tubular Capacitors use Mylar* Polyester film as a dielectric. Units are encased in a Mylar* Polyester tape wrap and ends sealed with a plastic thermosetting resin. This affords an excellent protection against moisture. Type XPR Capacitors are extremely small in size with high insulation resistance and exceptional capacitance stability.

ASTRON TYPE XPF**FLAT MINIATURE MYLAR*
DIELECTRIC CAPACITORS****TEMPERATURE RANGE**
-55°C to +125°C

With Voltage Derating

ASTRON Type XPF Capacitors use Mylar* Polyester film as a dielectric. This series of non-metallic cased units employ an outer Mylar* Polyester tape wrap and ends sealed with a plastic thermosetting resin. This affords an excellent protection against moisture. Ideally suited for use in applications requiring minimum size, high insulation resistance and exceptional capacitance stability.

IDEAL FOR COMPUTERS, COMMUNICATION AND TEST EQUIPMENT, INSTRUMENTS, ETC.

The latest development using encapsulating materials and advanced manufacturing techniques to insure "proven" high reliability and uniformity for mechanized and automatic assembly under severe conditions.

Utilizing a single ceramic dielectric element with 'fired on' electrodes and soldered connections, the Skottie ISM is extremely stable, eliminating any capacitor changing due solely to shifts of mechanical structure.

Completely encased in pressure molded epoxy casing, binding all parts intimately, including leads.

Meets MIL-Standard-202; MIL-C-20; MIL-C-11105; EIA Standards RS165 and EIA Standards 198.

Ideal for automatic insertion into printed wiring boards, cord wood packages and other special miniature assemblies.

Supplied on tape rolls with lead or body taping in loose, magazine or any other type packing.

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

All 19/32 diameter Glassmikes are supplied with pigtail leads.

LSG type capacitors have Plasticon L film-silicone fluid impregnant. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

CORNING FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING® Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into the standard CYFM, TYO and LO-CAP

units. The properties of these capacitors are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm. Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

COMPONENTS FOR MILITARY AND INDUSTRIAL EQUIPMENT AND SYSTEMS

Information is also readily available on the extensive Cornell-Dubilier electronic component line designed for use in military and industrial equipment and systems. The 144 page Cornell Dubilier COMPONENT SELECTOR contains detailed information on the complete CDE line.

In addition to the complete listing of ratings, specifications, and dimensions of CDE capacitors, RFI filters, wave filters, delay lines, pulse forming networks, electro-magnetic relays, vibrators, power supplies and instruments, the CDE COMPONENT SELECTOR contains over 25 pages of reference material. The CDE Capacitor Application Chart, RFI Filter Guideline Application Chart, and eight other capacitor selection charts included simplify selection and application of components.

Copies of the CDE COMPONENT SELECTOR are available from your local CDE AUTHORIZED INDUSTRIAL DISTRIBUTOR or from your local CDE field engineering office.

Tips for Added Value

STANDARD RATINGS

In selecting ratings of the "Preferred Replacement" capacitor line, Cornell-Dubilier has adhered to accepted industry standards whenever possible. This standardization does not limit the technician or result in field problems.

In the case of by-pass and coupling capacitors, ratings listed follow EIA standards for "Preferred Values." Standard decade values and associated tolerances are reproduced in the table at the right.

It will be noted from the table that ratings in frequent use prior to the adoption of the standard are not included. For example, .05 mfd. at $\pm 10\%$ tolerance is not a standard value—standards are .047 and .056. Considering the overlapping tolerance bands of these ratings, selection of the next higher or lower standard rating should give perfectly satisfactory service in the application.

The use of standard ratings results in benefits through lower prices and greater availability of stock through your CDE General Line Distributor.

PARENT CASE SIZES

CDE's careful selection of listed values to incorporate only "Parent Case Sizes" results in obtaining a higher quality unit without sacrifice of size or low cost. The "Parent Case Size" means that for a given capacitance rating, one or more voltage ratings have the same case size and price. In this case, the higher voltage unit is regarded as the "Parent Case Size."

In using the "Preferred Replacement" capacitor listings, always check the next higher voltage if the capacitance rating required is not listed at the specific voltage desired. For example, in the case of by-pass and coupling capacitors, if the rating is not listed under 200 volts, check the 400 and 600 volt listings. Selection of the higher voltage unit may be made in the knowledge that it has the same case size as the lower voltage unit and that no price penalty is being paid.

In addition, selection of the higher voltage unit provides an added measure of safety in the replacement through the higher dielectric strength.

In the case of electrolytic capacitors, listings are also based on "Parent Case Sizes." If the capacitance required is not listed at the voltage desired, always check the next higher voltages until the capacitance is listed. Use of the higher voltage unit again does not result in a price or size disadvantage. The higher voltage unit will perform better in the application since it will have a lower leakage current than the lower rated unit.

The use of "Parent Case Sizes" is another advantage offered by Cornell-Dubilier in its "Preferred Replacement" capacitor line.

WIDE APPLICATION RANGES

With the publication of this "REPLACEMENT COMPONENT SELECTOR," CDE introduces a completely new line of wide application range Twist-Prong electrolytic capacitors listed in Class 201.40 & 201.42. These wide application range Twist-Prongs provide a proper replacement for any electrolytic marked with a capacitance within the range on the wide application label and provided the voltage does not exceed the voltage on the wide application range label. The line is broad enough to cover replacement requirements but selective enough to be stocked **complete** by all CDE General Line Distributors—a proper replacement instantly available.

The wide application range Twist-Prong line takes into consideration the broad tolerances inherent in electrolytic manufacture and widely recognized throughout the industry. The standard tolerance table for electrolytics is shown at the right. By designing a completely new Twist-Prong line utilizing the latest materials and processes and recognizing the broad overlapping tolerance bands, CDE offers a Twist-Prong electrolytic line unsurpassed in quality or availability.

D. C. Aluminum Electrolytics

SINGLE SECTION, TUBULAR ELECTROLYTICS

These famous BLUE-BEAVER® tubular electrolytics are ideally suited for use in a wide variety of electronic equipment. Both types BR and BBR are hermetically sealed in aluminum cases with cardboard insulating sleeves. Negative is grounded to can. Cathodes of all units up to and including 150 volts are etched. Rubber-bakelite hermetic seal is used on all units and, over 3/8" diameter, the seal is provided with a rubber safety vent. Maximum operating temperature is 85C below 500VDCW and 65C, 500VDCW and above. For tolerance see page 2.

The type BRNP is a true non-polarized electrolytic suitable for use when no DC polarizing voltage is present. Processing and construction are essentially the same as that employed in AC motor starting capacitors to insure true non-polarized operation. Units are physically similar to the type BR—axial lead, hermetically sealed in aluminum cases with cardboard insulating sleeves. BRNP units are designed for use in cross-over networks and in boot-strap filtering applications.

MULTIPLE SECTION TUBULARS

These multiple section units feature construction similar to the type BBR. The aluminum case is cardboard insulated and equipped with combination vent and hermetic seal. Seven inch flexible leads are vinyl insulated. Mounting strap is standard. Maximum operating temperature is 85°C; tolerance per EIA standards (see page 2). Dimensions are uninsulated; add $1/16$ " to diameter and $3/16$ " to length for over-all size.

PRINTED CIRCUIT WIDE-APPLICATION-RANGE TWIST-PRONGS™

Class	Type
201 • 40	APC, BPC, CPC, DPC

This line of wide-application range printed circuit Twist-Prong electrolytics is a completely new CDE product. Dimensions and mountings have been selected to fill the vast majority of replacement requirements. The rating selection also fits most replacement applications. Ratings are based on a wide application range. This recognizes the wide tolerances inherent in electrolytic manufacture and widely recognized as standard throughout the electronics industry (see page 2 for further details). The wide tolerances permitted by electrolytic applications make possible a wide application range unit.

CDE guarantees that the wide application range unit is proper electrical replacement for any unit marked with a capacitance within that on the wide-range label provided the service voltage is within that on the wide-range label.

Recommended replacements for all Twist-Prongs in current applications are contained in the new 96 page CDE Twist-Prong Replacement Guide. Your CDE General Line Distributor will be happy to give you a copy.

CAPACITOR MOUNTING HARDWARE

Cornell-Dubilier Electronics has available a variety of mounting hardware recommended for capacitors subjected to conditions of moderate or acute vibration. The tubular straps, C-clamps, three and four footed mounting rings, clips, mounting plates and adapters for TWIST-PRONG® capacitors are designed to

hold the capacitor securely in position, positively eliminating any chance of capacitor wobble or damaging strain on capacitor terminals or body. CDE mounting hardware is cadmium-plated to resist corrosion. Non-conductive insulating sleeves of 5-ply Kraft are also listed.

TEMPERATURE COMPENSATING DISC

The type C temperature compensating disc is designed to provide a linear capacitance change with temperature. Two basic types are available. The NPO characteristic has a nominal zero capacitance change with temperature. The N750 has a nominal negative capacitance change of 750 parts per million per degree C. Units are rated 1000V DCW with an operating temperature range of -55°C to $+85^{\circ}\text{C}$. Except as noted, tolerance is $\pm 5\%$.

MOLDED MICA CAPACITORS

Five types of molded, silvered-mica dielectric capacitors provide a wide choice of ratings and form factors to fill replacement needs. Units are rated 500 VDCW and 1000 VDC test.

Operating temperature range is -55C to +85C. Tolerances

of individual stock units are listed in the tabulation. The CDE molded unit makes an ideal mica capacitor replacement where the small size and radial lead construction of the dipped unit is not required.

MEDIUM POWER PLASTIC CASED MICA

Type	Class
6, 15, 30B	203 • 50

These medium power plastic cased mica capacitors are frequently used as replacements in airborne and portable electronic equipment because of their small size and weight and their relatively high RF power handling capabilities. Units are encapsulated in low loss plastic cases. Voltages and operating

currents at various RF frequencies are given in the tabulation. Tolerance is $\pm 5\%$. Current ratings are based on 30C ambient. For higher temperatures, use the following percentages of currents shown — to 50C, 95%; up to 60C, 85%; up to 70C, 70%. Maximum operating temperature is 70C.

MOLDED MYLAR* TUBULAR

The type PM utilizes an all MYLAR* dielectric; has axial leads; and is molded in a low loss material which exhibits excellent moisture and humidity resistance. The case is wax-free and leakproof. Operating temperature range is -55C to 125C. Above 85C derate voltage by 10% at 100C and by 50% at 125C. Standard tolerance is $\pm 10\%$. Listings are based on Parent Case Sizes and standard ratings (see page 2); check higher voltages if rating required is not shown at desired voltage.

*MYLAR is a DuPont™.

AC ELECTROLYTIC (MOTOR START) CAPACITORS

Although not designed for electronic applications, these units have been included at the request of many service technicians who also service major appliances and air conditioners. The type ETW is widely used in original equipment and as replacements in motor starting applications. The AC voltage rating is an intermittent rating based on a duty cycle not exceeding twenty 3 second periods per hour. Maximum operating temperature at the recommended duty cycle is 65C. Operation to 85C is permissible at reduced duty cycle or voltage. The ETW is a plastic cased unit with 3 way terminals. End caps and brackets are available as accessories.

Radio Interference Filters

VEHICULAR FILTERS

 Class
220 • 00

The most frequent Radio Interference problem encountered by the service technician is the improvement in signal to noise ratio in mobile applications of Citizen's Band, commercial, and amateur high frequency communications equipment. The vehicular filters listed will solve the problems encountered provided good grounding and bonding practices are followed and use made of suppressors.

The prime source of noise from a gasoline engine is ignition noise from the high tension spark system. Use of special ignition wire, spark plug and distributor suppressors, resistor plugs, or combinations of these as recommended by the engine manufacturer will reduce this noise to reasonable value. After this step, other noises will probably be apparent.

A frequently overlooked source of a sharp "popping" noise is the low tension side of the ignition coil. After bonding the coil bracket to the engine, a CDE coaxial feedthrough capacitor should be installed in the lead between the battery and coil. The capacitor bracket should be bonded to the coil bracket. The feed-through will completely isolate the coil from its wire as far as noise is concerned. The generator is probably the second most frequent cause of noise — in this case a grinding whine. To reduce this noise, a CDE coaxial feedthrough capacitor should replace the normal capacitor in the lead to the armature terminal on the voltage regulator. In addition, the noise can be reduced by shielding the lead to the regulator field terminal. In many cases, there may be buzzing caused by the action of the regulator. This may be reduced by enclosing the regulator in a metal case, bringing the shielded lead through with coaxial fittings and installing two feedthrough capacitors on the low voltage leads from the regulator.

Other popping or clicking noises from various accessories can be reduced by installing CDE by-pass capacitors directly on the offending devices.

RESIDENTIAL RADIO INTERFERENCE FILTERS

These QUIETONE® Radio Interference filters are designed for residential and light commercial applications on appliances and office machines. Noise from small portable electrical appliances can usually be reduced through use of a circuit 1 filter such as the IF-20, IF-4, or IF-5. The circuit 2 filter, IF-6, will provide slightly more reduction. The IF-21, circuit 3, will provide additional attenuation. The greatest attenuation will be achieved through the use of circuit 4 filters — IF-18 and 19.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D6 high voltage capacitors are designed to assure reliable operation where space is at a premium. These capacitors utilize a combination of polyester film and high quality capacitor tissue. The impregnation in a highly purified mineral provides for extremely high insulation resistance and low power factor. The hermetic housing, which may be leaded glass or ex glass, allows for operation under extreme humidity.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors. D6 for 85°C; D6H for 125°C operation.

ADJUSTABLE, SEALED POLYSTYRENE CAPACITORS

F-C-I adjustable capacitors are designed for use in ultra-precise circuits where a large capacitance of an extremely close tolerance is required, and yet cannot be predicted in advance due to second order effects in the circuitry. In order to attain the exact value of capacitance needed in such circuits, F-C-I has designed a series of polystyrene capacitors whose capacitance value may be adjusted over a range of plus or minus 1 1/2% of nominal value. (Plus or minus 2% for values of 0.1 Mf or lower can be attained.) The windings are completely non-inductive, thus minimizing power factor and soakage.

TYPE KM-7 HIGH VOLTAGE BAKELITE CASED CAPACITORS

F-C-I Type KM-7 capacitors are designed for high voltage applications where space is at a premium. Capacitors are housed in cylindrical electrical grade Bakelite cases and are filled with a purified mineral oil. The dielectric employed is a combination of polyester film and the finest grade capacitor tissue. Easy mounting is accomplished with the 1/4-20 x 7/8 bolts. Corona is held to minimum because of the elimination of all metal. These capacitors are

ideal for use in high voltage power supplies, test equipment, X-Ray equipment, energy storage, etc. Suitable for operation up to 85°C. All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors.

FILM CAPACITORS, INC.

HIGH VOLTAGE TYPE KM-2 CAPACITORS — 85 C OPERATION WITH SOLDER-SEAL CERAMIC BUSHINGS

These type KM-2 capacitors have been designed specifically to meet the demand for smaller, more reliable capacitors that will withstand the severe operating conditions encountered in military and industrial electronic equipment. The dielectric employed is a combination of synthetic Polyester and the finest grade capacitor tissue. Capacitor cases are of CP70 rectangular construction. Units will meet the requirements of proposed specification MIL-C-19978. Terminals are of the solder seal ceramic type with screw bolt terminations for easy connections and true hermetic seal. Capacity tolerance is plus or minus 10% with an insulation resistance of 10,000 megohm microfarads. Specify type KMH-2 for operating temperatures up to 125°C. Case sizes for the KMH-2 and engineering data for other series are available upon request. CP07 mounting brackets are available for all sizes.

SERVICE-DESIGNED CAPACITORS

HOW TO SELECT THE RIGHT REPLACEMENT

It is easy to select the right G-E replacement for any aluminum electrolytic capacitor used in the past ten years.

IF YOU KNOW RATING ONLY: Refer to correct type of capacitor and locate the G-E capacitor with desired characteristics. For example if you need single-section tubular with capacitance of 55 mfd at 450 V, refer to QT TUBULAR ELECTROLYTICS, Single-Section. Look for the capacitance range in which 55 mfd falls (QT1-17: 40-60 mfd; QT1-18: 50-60 mfd; QT1-19: 50-60 mfd). The rating in bold-face type (60 mfd in the above rating) is the absolute or maximum rating. Check voltage required. Since QT1-19 is the only one rated for 450V, it is the correct replacement.

If rating needed were 55 mfd at 250 volts you could correctly use either QT1-18 (up to 350V) or QT1-19 (up to 450V), since G-E capacitors will work properly at any voltage up to their maximum rating. You would then choose between QT1-18

and QT1-19 on the basis of the size ($\frac{1}{4}$ " difference in length or price and probably choose QT1-18.

TO SELECT MULTI-SECTION UNITS (either tubular or can type,) follow this same process for each section. Here's a quick way to do it:

1. List values of original capacitor sections in ascending order of value.
2. Match values with their voltage ratings.
3. Find G-E units that most closely match capacitance value starting from the lowest value. Use next higher value if first unit value does not match exactly.
4. Be sure that G-E voltage ratings equal or exceed original voltage ratings. Proper replacement will usually fall with two or three catalog numbers of the first unit checked.

SOLID ELECTROLYTE SD TANTALUM CAPACITORS

GLP Electronics Series SD Solid Tantalum Capacitors provide unsurpassed performance for circuits demanding reliable components. They are the result of long research and development projects aimed at producing in production quantities, reliable solid tantalum capacitors.

All Series SD capacitors are designed with a porous tantalum or wire tantalum anode formed by electrochemical means to produce an extremely stable oxide dielectric. The anode is then coated with a solid semi-conductor type of electrolyte, thus preparing it for a conductive coating that is used for the cathode. The entire assembly is then hermetically sealed in a hot-tinned brass can with a time tested glass-to-metal seal, thus giving full protection against all adverse outside environmental conditions for long term operation over a temperature range from -80°C to $+125^{\circ}\text{C}$, and under proper conditions can be operated to temperatures approaching 150°C .

GLP Series SD Capacitors are designed to meet or exceed the requirements of style CS 12 and CS 13 of MIL C 26655A.

MICRO-MINIATURE TANTALUM CAPACITORS

GLP Type MM Solid Tantalum Capacitors are designed to provide the ultimate in micro-miniaturization. They are the first of their kind to be offered which are applicable to both the military and commercial fields. They feature wider temperature ranges, lower leakage characteristics, longer shelf life, and smaller physical sizes than most conventional miniature solid tantalum capacitors.

Micro-Miniature Solid Tantalum Capacitors are designed to operate from -55°C to $+125^{\circ}\text{C}$ where reliability and performance are prime factors.

ing performance of digital computers and related equipment
nds components of the highest grade. Improved internal con-
tion provides for low impedance at high frequencies, assures
rior operation through the operating range at -20°C to
 $+70^{\circ}\text{C}$.

Cases are of heavy gauge aluminum. A leak proof seal is obtained
by rolling the top of the case into a pliable synthetic rubber gasket.
Terminals are available in two styles: tapped terminal inserts, for bus
bar connections and solder lug terminals for permanent connections.
The capacitors are furnished with bare case, one piece vinyl sleeve,
or clear rigid plastic sleeve.

BEST STABILITY

VOLTAGES TO 125 VOLTS

The tiny size and excellent stability of the Hi-VolTan® suggest its use in applications where size, weight, stability and reliability are prime factors.

The unique construction with no electrolyte eliminates the major causes for instability and high dissipation factor.

The leakage currents experienced are so low as to defy measurement. Accordingly the leakage current is expressed as insulation resistance.

Voltage ratings up to 125 volts are available.

Completely distortion free coupling can be accomplished into the megacycle range with Hi-VolTan®.

TYPE IMP MOLDED TUBULAR PAPER CAPACITORS

Noninductive extended-foil section molded in nonflammable thermosetting plastic. High insulation resistance. Excellent power factor. Withstands standard RETMA Humidity-resistance Test. Extremely rugged. Very long life.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with $\frac{1}{8}$ " extended shaft for knob control or shaft coupling. (Type "B") "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC". Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with $\frac{1}{16}$ " extended shaft for knob control or shaft coupling. (Type "B") "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"NZ-10" CAPACITORS

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

Net Price \$4.77

"FC" and "FNC" COUPLINGS

FEATURES—The "FC-48-S" is an insulated flexible coupling designed to provide for mechanical gauging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-48-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION—Brass rotors and stators are

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods. "M" type plates and ball-bearing construction can also be made available as specials.

soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated statite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

"VU" CAPACITORS

FEATURES—The "VU" is a uniquely designed UHF tuning capacitor requiring completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated statite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"MAC" and "MACBF" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered and designed to produce a rugged, stable, highly reliable miniature component for today's equipment.

CONSTRUCTION—Its silicone treated statite base is only $\frac{3}{4}$ " x $\frac{1}{2}$ ". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screw-driver adjustment. Air gap is 0.017" nominal and tested at 880 V. R.M.S., 60 cycles, except the MAC-30 which has an air gap of 0.0135" nominal and is tested at 600 V. R.M.S., 60 cycles. "MACBF" is the butterfly version of the "MAC." It is designed for dual split-stator capacitor use.

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"MC", "MCA" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. Hammarlund "MC" capacitors, except for "MCA" types, have silver plated phosphor bronze wiping contact, silicone-treated statite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. Multi-section capacitors can be designed for special applications.

A rotor stop is available on "MC" capacitors on special order.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated statite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated statite base. Front and rear bearings with wide individual silver plated phosphor bronze wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. Multi-section capacitors can also be made available to customer specifications.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA", "HFA DIFFERENTIAL",

"HFA DUAL", and "HFB" CAPACITORS

SINGLE SECTION CAPACITORS—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DIFFERENTIAL TYPE CAPACITORS—The "HFA" type units are now available as standard items in the differential type construction. The unit is mounted with an ungrounded rotor making it suitable for a wide field of application. In addition to the features of the "HFA" the design also incorporates the use of a spring bronze silver plated wiping contact on the rotor.

DOUBLE SECTION CAPACITORS—The "HFB" and the "HFB" are dual balanced rotor capacitors employing front and rear panels plus a single ball rear thrust. Both units are applicable to transmitter design. The construction features are similar to the "HFA" and the "HFA Differential" type capacitors. Additional special feature employed on the "HFB" type incorporates the use of an insulated shaft extension on the rotor to safeguard against shock hazards with the application of high voltages.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFB" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

SPECIAL VARIABLE CAPACITORS FOR ALL NEEDS

AVAILABLE MODIFICATIONS

Hammarlund's more than 50 years experience in the development and manufacture of capacitors has resulted in an endless knowledge of techniques. Such "know-how" includes the making of special capacitors using standard techniques and/or components, or giving birth to a completely new custom product—from concept through to production.

An example of this extended knowledge is the fact that Hammarlund has manufactured over 1000 different types of APC capacitors.

These capacitors came into being as a result of the many modifications required by our customers for their specific applications. Any standard capacitor listed in this catalog can be modified to customer requirements. Such variations include end-panels, shaft diameter and lengths, bearings, special materials and finishes, special air gaps on most units, etc.

Custom made precision units to suit all electrical and environmental specifications can be fabricated on special order. The combinations are endless.

RELY ON JFD THE TRIMMER PISTON CAPACITORS AMERICA KNOWS BEST!

The most reliable in the industry . . .
 . . . the most advanced design . . .
 . . . the largest selection (over 300 models) . . .

finest research and development facilities . . . a sales and service organization that spans the globe—are a few of the factors why JFD is in trimmer piston capacitors. Shown here is a short-form representation of the trimmers now available from JFD for prompt delivery. JFD 'N' series utilize Hi-Life mechanisms, greatly increasing adjustment life. 'N' series (except for quartz units) also use 0483 green glass which affords higher Q and 25% greater capacitance. 'Y' series also use Hi-Life adjustment mechanism. For complete listings write for JFD Trimmer also manufactures LC tuners, metallized inductors, ceramic fixed capacitors, and delay lines fully described in individual catalogs and bulletins.

① Current ratings can usually be increased by 50% with proper forced air cooling, and up to 400% with water cooling.

② Nominal dimensions are for the largest unit of each type.

③ Voltage and current limitations are dependent upon capacity and frequency. Specific voltage and current information at all frequencies is available upon request.

NOTE: A series of adjustable capacitors is available to cover the range of 8 to 1000 pf at 10 kv.

Jennings application engineers are available to discuss special application problems. If necessary we will run special tests in the Jennings Radio Frequency Testing Laboratory where equipment is available with frequencies up to 600 mc, and power ratings up to 100 kw.

current ratings can usually be increased by 50% with proper forced air cooling, and up to 400% with water cooling.

Nominal dimensions are for the largest unit of each type.

Voltage and current limitations are dependent upon capacity and frequency. Specific voltage and current information at all frequencies is available upon request.

Forced air cooling.

High Voltage Measuring Equipment

MODEL JP 325 HIGH VOLTAGE PROBE
VOLTAGE RATINGS: 40, 50, or 60 KV
peak.

VOLTAGE DIVISION RATIO: 325 to 1 to
termination of 3 ft. of RG-58 A U cable.

MALLORY CAPACITORS

FP-WP AND PFP-PWP METAL CAN ELECTROLYTIC CAPACITORS

FP-WP capacitors are manufactured to the most rigid quality standards. They are designed for extremely long-life service at 85° C. All are designed with "etched cathodes" for hum-free operation and feature exclusive vent and seal construction. FP-WP types have standard twist-prongs, PFP-PWP fit exactly into Elco standard printed circuit boards. FPS is special mounting used in Delco auto radios.

"A" suffix indicates new reduced can size. All PFP-PWP types may be used in standard twist-prong mounting while FP-WP types may be quickly adapted to printed circuit mounting by using the FPA Adapter Kit (Net Each, 27c). All cases are at negative potential. See complete capacitor hardware listing on another page. *SIZES are shown at end of listing.

MALLORY CAPACITORS

TC-TCO-TCS and TCT TUBULAR DRY ELECTROLYTICS

Metal tubulars with insul. sleeve. TC, TCN (non-polar) are single section, 3" bare

tinned leads. TCO is dual common negative with 7" insul. leads. TCS, dual separate section, solder lugs. TCT, triple common neg., 7" insul. leads. With mtg. strap, except TC below 1% dia. Rates +25% C except (*), rated +65% C EIA tolerances.

INDUSTRIAL ELECTROLYTICS

Heavy duty industrial aluminum electrolytics which also meet detail specifications of MIL-C-62. PB series plugs into standard octal tube socket. BS series are bathtub style hermetically sealed in hot-tinned steel case with two solder lugs and mounting flanges. Standard EIA tolerances apply to BS series and operating temperature is -55° C to +65° C. RS, HS, and RM series are metal cased with threaded necks and insulated stranded wires.

MALLORY TANTALUM CAPACITORS

TANTALUM FOIL CAPACITORS (MIL-C-3965)

Mallory tantalum foil capacitors are furnished in two temperature ranges (+85° C and +125° C) and in two types of construction (plain foil or etched foil). Both temperature ranges and both types of construction are available in either polarized or non-polarized ratings.

All Model Numbers and Prices listed are for bare metal cases. For Mylar* insulating sleeve, add one number to MILL type (i.e., CL34+1=CL35, etc.) or change 12th digit in Mallory number from "0" to "1" (i.e., TAF505M006N1A). Add 10¢ to all prices shown.

MIL Size T1 MIL Size T1 MIL Size T2 MIL Size T8

The "slug" type of tantalum capacitor utilizes a porous mode of sintered tantalum. Intended for polar applications, these capacitors offer the best characteristics of all the types described in this catalog. They exceed the vibration test of MIL-C-3965C, Grade 3.

Available from stock in two physical types—the "hat-shaped" type, 4 sizes (Y, U, F, G) and the "straight-cylindrical" type, 3 sizes (SU, SF, SG) which have the same range of capacitance and voltage as the equivalent hat-shape sizes. Hat-shape types are offered in two operating temperature ranges, -55°C to +85°C and -55°C to 125°C; the straight-cylindrical type is offered only in the

85°C range. Tolerances: See footnotes under price and stock tables. Units insulated with plastic sleeve are available at slight extra cost.

Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SUB6". (Where a space is not underlined, the capacitor is NOT available as a straight-cylindrical type.) If hat-shape capacitor is desired, write this number without the space in "30UB6". Add K, or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

Complete MIL type designation as follows: For hat-shape, uninsulated

type, insert "44" after "CL_"; for insulated type insert "45" instead. For straight-cylindrical shape, uninsulated, insert "64" after "CL_"; for insulated type insert "65" instead. †Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SB6." (Where a space is not provided, the capacitor is **NOT** available as a straight-cylindrical type.) If a hat-shape capacitor is desired, write this number without the space as in "30UB6." Add K, or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete MIL type designation as follows: For hat-shape, uninsulated

type, insert "44" after "CL"; for insulated type insert "45" instead. For straight-cylindrical shape, uninsulated, insert "64" after "CL"; for insulated type insert "65" instead. Note: CL64, CL65 not available 125°C ratings ("C" char). Insert M, or K before "B" to indicate tolerance. Previous MIL tolerances S and T, can be supplied.

‡High capacitance units.

\$Not available as CL64, CL65 straight-cylindrical capacitors.

Tolerances: T = -15+50%; S = -15+20%; M = ±20%; K = ±10%

Smallest subminiature electrolytic capacitors available. The anode is specially processed tantalum wire sealed into a silver case. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance can exceed nominal circuit values (standard tolerance, -0 +100%). Wide use in hearing aids and other subminiature apparatus. Operating

temperature range: -55°C to +85°C. Nine of thirteen available case sizes stocked.

TAN-O-MITE® SERIES TF TANTALUM FOIL CAPACITORS

in and etched tantalum foil units stocked in polar and non-polar types. The polar unit is intended for applications in which reversals of potential do not occur or will withstand reversals up to 3.75 VDC except where the voltage rating is less. Foil types offer closer tolerance, also leakage and power factor characteristics superior to wire types. The etched foil units afford the maximum capacitance for a given case size and have somewhat lower leakage current than the plain foil units. Operating temperature range: -55°C to +55°C. Tolerances: Plain foil, $\pm 20\%$ (MIL code "M"), etched foil, less than 50 volts, -15 +75% (MIL code "S"), 50-99 volts, -15 +50% (T); 100-150 volts, -15 +50% (S), $1\frac{1}{2}$ " axial leads. Designed to meet MIL-C-26, CL37. 5 MIL case sizes. All units meet MIL vibration rating Grade 3. Units can be furnished with plastic sleeve.

HIGH VOLTAGE CAPACITORS TYPE LK

MYLAR* PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

SANGAMO ELECTRIC COMPANY

ELECTRONIC COMPONENTS

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND
HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. For more complete information write for Bulletin 2236.

Note: 1-3/8" bracket available with 2 feet only. Other sizes are available with 2 or 3 feet. Specify accordingly.

Type CS12 and CS13 SOLID TANTALUM CAPACITORS

The Sangamo Types CS12 and CS13 are solid electrolyte tantalum capacitors designed for filter, by-pass, coupling, blocking and other low voltage d-c applications found in telemetering devices, airborne systems, computers and missiles. They provide highest capacitance per cubic inch in an extremely small hermetically sealed container. All units are suitable for operation at full rated voltages over the temperature range of -80°C to $+85^{\circ}\text{C}$ and when properly derated will operate up to $+125^{\circ}\text{C}$ per MIL-C-26655 specification.

Types F1-F2-F3 MICA CAPACITORS

Type F1-F2

TYPE F1

TYPE F2

Type F3

TYPE F3

The Types F1, F2 and F3 are the smallest of the Sango line of transmitting capacitors. They are encapsulated in low loss molded phenolic cases and possess a wide range of voltage and current ratings. The mica and foil sections are pressure clamped, vacuum impregnated and encapsulated in the case in such a manner as to provide stable characteristics and adequate resistance to moisture. Type F1 and F2 capacitors meet or exceed the applicable requirements of the MIL-C-5 specification.

ELECTRONIC COMPONENTS

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Ethern, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

SPRAGUE CAPACITORS

85°C FOIL TANTALEX® CAPACITORS

- For applications where small physical size, stable electrical characteristics, and long service life are important.
- Type 110D and 112D also available marked to meet MIL-C-3965. Order by complete military type designation.
- High capacitance stability even at low operating temperatures, unlike aluminum-foil electrolytics.
- Extremely low leakage current.

- Capacitance tolerance: Types 110D and 111D. $\pm 20\%$ and $\pm 15\%$. Type 112D and 113D $+75\%$, -15% $+50\%$, -15% and $+30\%$ -15% .
- Plastic wrap. For bare case, end Cap No. in "0" instead of "1".

SPRAGUE CAPACITORS

VITAMIN Q® SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Her-

a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

tically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements. Impregnated with Vitamin Q, a substantially linear, controllable molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: -55°C to $+85^{\circ}\text{C}$ and -55°C to $+125^{\circ}\text{C}$. Because of their Vitamin Q impregnation, these subminiature capacitors have

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts). Recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses

are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

118P DIFILM® METALLIZED CAPACITORS

Metallized Paper and of Polyester Film, Impregnated With Special High-Temperature Mineral Wax

Subjected to Stringent Quality Control During Manufacture

Higher Insulation Resistance Than Any Other Metallized Paper Capacitors—at 125°C, Minimum Product of Insulation Resistance and Capacitance is 10 Megohm-microfarads for 200 V Units or 40 Megohm-microfarads for 400 and 600 V Units

- The Best of Their Type Possible to Produce at the Present State of the Art
- Rated for Operation at 125°C WITHOUT VOLTAGE DERATING
- Unique Dual Dielectric—a Combination of Metallized Paper and of Polyester Film, Impregnated With Special High-Temperature Mineral Wax
- Capacitor Sections are Effectively of Non-inductive Construction, Resulting in Capacitors Unmatched in Performance Quality by any Other Metallized Capacitors
- Hermetically Sealed, with Glass-to-metal Solder-seal Terminals
- Have Unusual Self-healing Characteristics, in the Rare Event of Capacitor Dielectric Breakdown
- May be Used at Extremely Low Voltages Where Metallized Paper Construction has Previously Been Unsatisfactory
- For Complete Performance Characteristics, see Latest Issue of Engineering Bulletin 2211
- For Units With Outer Plastic Insulating Sleeves, Change Last Digit of Cat. No. From "2" to "4"
- Capacitors Listed Below Are Ungrounded Case (Insulating Section) Units Without Outer Insulating Sleeves. For Information on Other Styles Consult Your Sprague Industrial Distributor

SPRAGUE CAPACITORS

121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING — extremely important in military and industrial equipment where higher temperatures are encountered.
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page.
- High insulation resistance — at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads.
- Hermetically sealed with glass-to-metal solder-seal terminals — capacitor cases are of corrosion

sion resistant materials — similar in appearance to Type 118P.

- May be operated at low voltages, unlike many other metallized capacitors.
- For complete performance data, see latest issue of Engineering Bulletin 2210.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For quantity prices call your Sprague Industrial Distributor.

- For units with outer plastic insulating sleeve change last digit in cat. no. from 2 to 4.

FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices... A 3-terminal network with the case as one terminal... The selected filter should have a rating higher than the continuous operating current of the offending device... A single filter connected to the high side of the line is usually sufficient... In severe cases a filter in each leg of the power line may be necessary... For three or four-wire systems, a filter in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating Sprague HYPASS® Capacitor... Provides exceptionally high attenuation frequencies above 5 megacycles... Intended for small devices with continuous current ratings up to 20 amperes.

CRAMOLIN fluid is a combination protection and cleaning preparation. It is preferably applied on contacts already in use, or on apparatus where contact deficiency has occurred and where these contacts should be protected against oxidation. May be used on old and new contacts, and with other CRAMOLIN products.

CRAMOLIN-SPECIAL fluid is not a cleaning preparation, however, it does provide the essential protection needed. It is mainly used in the manufacture of new instruments or apparatus where the improvement of performance is desired as well as to preserve and increase the life of the apparatus. Should be used on new contacts or those contacts that have been previously cleaned with CRAMOLIN.

CRAMOLIN-PASTE is a semi-solid form and is also a combination protection and cleaning preparation. Usually used for high amperage and/or high voltage use. Can be used after applications of CRAMOLIN for good results.

Ask or write for Bulletin C-200 for complete Technical Data.

CAEON SOLVENT #27

Repackaged Freon® TF Solvent
(Trichlorotrifluoroethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

- NON-FLAMMABLE
- VIRTUALLY NON-TOXIC
- CHEMICALLY AND PHYSICALLY PURE
- CHEMICALLY AND THERMALLY INERT
- STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeson #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluble in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems, will remove soils or contaminants and leave the surface "Residue-Free". All standard methods of using a solvent may be employed.

Chokes and Hardware

TRANSMITTING CHOKES CERAMIC-COATED TYPE

Consists of five graduated pies continuously wound. Pies are not resonant on an amateur band. Distributed capacity kept at a minimum. Each choke is wound on $\frac{1}{8}$ " diameter steatite rod, has connection lugs and a mounting foot.

All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing between the individual pies.

IRON CORE RF CHOKES SILK-COVERED WIRE TYPE

Improves the efficiency of any circuit requiring an RF choke. Finely divided molded metallic core improves "Q"; results from DC resistance being 40-50% less for a given inductance than regular air-core types. DC voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are silk-covered enamel wire terminated on handy soldering lugs. Chokes mounted in small round shield can, $1\frac{1}{2}$ " x $1\frac{1}{4}$ ".

COIL FORMS — CERAMIC AND PHENOLIC

Standard Numbers: Have silicone fiberglass collars, silver-plated solder terminals, cadmium-plated studs and ceramic body unless otherwise noted. Powdered iron core except 100 mc up (Suffix One, -5), which is brass. **To Order:** Use Model number followed by Suffix One (for frequency range) and Suffix Two (for terminal and collar types). Example: 1465-1-1 for 0.2-1.5 mc with two ring terminals. Types 1996 and 2151 come with clip terminals only, and require no final suffix (Two). **Alternate Numbers:** Identical coil form to standard numbers but have tin-plated terminals, nickel-plated studs and related hardware except for brass tuning slug with rhodium flash over silver-plate. Types 1465 and 1544 employ same slug but with brass lead to increase range; no alternate finish available. All units available in same variations (suffixes) at same respective prices for adjacent standard number.

MIL-SPEC MOLDED CHOKES

MILLER MOLDED COILS CONFORM TO MIL-C-15305

This group of molded chokes affords the design engineer a wide range of inductance values, current ratings, and sizes which will fulfill most normal design requirements. Manufactured under strict Quality Control supervision and tested in accordance with MIL Standard 105 the unit is guaranteed uniformity and reliability in every coil. This series conforms to the MIL-C-15305, Grade and Class 7.

Tabulated currents in milliamperes are maximum values based on a temperature rise not to exceed 35° C, nor wattage dissipation in excess of listed values.

Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils

The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

Shielded Subminiature Adjustable R.F. Coils

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

Encapsulated Adjustable R.F. Coils

This series of encapsulated coils offer the maximum possible performance from an adjustable type of inductor. The coil is wound on an epoxy form which is placed inside an epoxy cup and this area filled with epoxy resin. In this manner a complete seal against moisture is achieved and good mechanical stability is assured.

Frequency Selective R.F. Chokes

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

The RFC-3.5, RFC-7, and RFC-14 are the standoff type, mounted by a single 6-32 screw. All other coils are mounted with axial leads.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from 1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pl universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form $\frac{3}{8}$ " diameter x $\frac{3}{4}$ " long. Iron core form $\frac{3}{8}$ " diameter x $\frac{7}{8}$ " long. Leads are $\frac{1}{16}$ " long.

F.M. Variable Capacitor

This 3-gang 7-plate variable capacitor is rigidly constructed with widely spaced (.042 Air Gap) plates to assure highest stability. The plate control results in an almost linear frequency versus rotation characteristics. Although the capacitor is supplied with 3 trimmer capacitors attached, it is recommended that the oscillator trimmer be replaced with a small NPO adjustable ceramic. The tuning capacitor has a $\frac{1}{4}$ " diameter shaft $1\frac{1}{8}$ " long. Capacitor range is 6.6-23 mmf. Trimmer capacitor will add to these values.

F.M. Stereo Multiplex Inductors

Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F-M carrier in the conventional way while L minus R amplitude modulates a 38KC stereophonic subcarrier, and the resulting double side-band AM signal (23-53KC) with suppressed carrier, likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

In the receiver the output of the F-M detector comprises the L-R audio signal, the 19KC pilot sub-carrier, and the 23-53KC A-M modulated (L-R), suppressed carrier signal. It is then required to separate the 23-53KC signal by means of a suitable filter, generate a 38KC signal under the control of the 19KC pilot sub-carrier, re-insert the sub-carrier, and detect the resulting signal. This yields L-R. This must then be combined in a suitable matrix with the L-R signal in such a manner that the L signal appears at one output terminal and the R signal at another.

Communications I.F. Transformers

Designed for experimental use in communications equipment where selectivity and stability are important. The 100 kc. I.F. transformer and BFO coil are intended for tube application, while the 455 kc. crystal filter I.F. transformers have taps on the winding to allow for use with both tubes and transistors. The 1800 kc. I.F. transformer offers the best possible "Q" with stability to give a degree of selectivity that compares with lower frequency I.F. transformers. This transformer is for use with tubes and transistors.

1770 is a double tuned I.F. transformer having taps on both Primary and Secondary windings.

inductors

Type EV-263 VARIABLE INDUCTORS

Sangamo Type EV encapsulated variable inductors are guaranteed adjustable $\pm 10\%$ from nominal inductance value, enabling the designer to tune circuit characteristics to exact requirements. Terminals are on a 0.10" grid. The maximum operating temperature of these units is 105°C. Header pads keep unit off the mounting surface for easy flux removal and prevention of moisture accumulation. For more complete information write for Bulletin 2720.

for FINE INSTRUMENT AND MACHINE CONTROLS

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLC is the output shaft in the rear.

Exploded view shows engineered miniature gear system, to permit precise, fine tuning of controls. As shown, 9 to 1 ratio. Other ratios designed to specifications.

Brass gears; black anodized aluminum knob and dial.
Available with knurled or non-knurled outside knob.

rsatile, miniaturized, right angle rotary controls.

aturing dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydro-gren annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

SLIP-CLUTCH, SAFETY KNOBS

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For $\frac{1}{4}$ " shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch"; automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

*Normally set for $2\frac{1}{2}$ - 5" lbs. Can be modified for other requirements.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

AIR VARIABLE CAPACITORS

Whether the choice . . . sub-miniature capacitors for the circuit use—or large, heavy duty types . . . time again engineers specify Johnson Air Variables! More than 11 basic capacitor types are readily available with selection of single section, dual section, butterfly differential models. Units range in size from the nutive sub-miniature Type "U" capacitors, to large, ed heavy duty "C" and "D" types. Standard stock citors in a wide range of plate spacings, capacity per on, breakdown ratings, and finishes will meet many ary and commercial applications . . . specials for yfications are also available in production quantities.

TYPE "U", "UA" AND "UB" CAPACITORS

to, improve performance, and save valuable space in compact rotor equipment with these sub-miniature air variable capacitors. Available in single-section, differential and butterfly types, they occupy minimum mounting area. Type "U" requires less than 0.2 square inch of space, and Type "L" less than 0.1 square inch. Both for chassis or printed board mounting. Rotors and stators are machined from one piece of solid brass, providing outstanding mechanical stability and uniformity. Units offer high Q's (greater than 150 at 1 mc.), high dielectric-to-mass ratio (1/2 to 10 inch ounces), and exceptionally high temperature coefficients (plus or minus 10 ppm). They provide absolute freedom from moisture entrapment found in air capacitors of the enclosed or solid dielectric type. All metal silver-plated—ceramic is stainless, Grade L-4 or better. Exceptionally rugged construction. Available in 100 volt and 200 volt versions available to 1100 volts DC. No special tools required for installation and accommodates large screwdriver for quick adjustment. Choice of wide, double-pierced or printed circuit style terminal. Single-section models available in "LocTab": 2-Hole; Printed Circuit: 4-Hole. Differential and Butterfly types available in Printed Circuit types.

"U-LC" TUNERS

lines precision machined Type "U" capacitor air wound, silver-plated inductor to form compact, tuneable LC circuit. Excellent "Q" and temperature stability - capacitor end framed with #10-32 threaded bushing for mounting. Recessed screwdriver slot contributes to ease of tuning - slot on opposite end of rotor shaft also can be used for adjustment. High torque (2½ to 3 inch ounces) holds rotor to adjusted position. All circuit types available on special order.

TUBE SOCKETS-GENERAL SPECIFICATIONS

To simplify selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, Johnson tube sockets have been categorized under a socket standardization program. General specifications are listed on the following pages - detailed specifications on the complete socket line are covered in Socket Standardization Booklet 536. Should you desire a copy for Engineering Department use, please make your request on company letterhead.

Standard - Commercial grade for general requirements. Bayonet sockets have porcelain bases, glazed top and sides with .0002 cadmium-plated phosphor bronze contacts. Wafer sockets have glazed steatite bases, DC-200 treated. Contacts are plated brass with steel springs. Shells and shields are etched aluminum.

Industrial - Higher quality than Standard types. Glazed steatite bases, DC-200 treated. Contacts .0005 silver-plated beryllium copper on Bayonet Sockets. .0005 silver-plated phosphor bronze with beryllium copper springs on Wafer Sockets. Shells and shields are aluminum, iridite No. 14 treated. (Except 123-206-100.) Fungus resistant cushion washers under contacts.

Military - Top quality for military requirements. Glazed grade L-4 or better steatite bases, DC-200 treated. Phosphor bronze contacts and beryllium copper springs, .001 silver-plated .0005 silver-plated beryllium copper on Wafer Sockets. Shells are brass .0003 nickel-plated. Threaded hardware .0002 nickel-plated, unthreaded hardware .0003. Hot tip-dipped terminals. Fungus resistant cushion washers. (Glass base melamine on Wafers.) Wafer sockets protected for 200 hour salt spray test.

ETS FOR RCA 8072, 8121 AND SIMILAR TUBES

low frequency tubes such as RCA #8072, #8121, and #8122. Base materials have low dielectric constants which result in low pin and shunt capacity. Elevation pads permit excellent base pin lift. Raised pads provides indexing - aids in aligning tube pins and contacts. Base pins are spaced to provide good electrical contact at base of tube - providing minimum inductance. Barriers in terminals for increased leakage path and higher voltage breakdown. Grounding tabs provided by tabs located at mounting points adjacent to cathode. Grounding tabs provide configuration results in low capacity; three point mounting probability. Terminals numbered. Teflon chimney offers increased insulation and low inductance screen. CITIZENS' BAND RADIO

THE RCA MARK VIII Type 17704

The RCA Mark VIII Radio-Phone is a 27 megacycle citizens' band 2-Way Radio designed to provide business and industry with a dependable short-range communications facility. Its low cost and uncomplicated operating features also make it ideal for use by sportsmen.

The Mark VIII may be operated for business or personal use. Although no operator's license is required, a station license is necessary and may be obtained through application to the FCC using the form supplied with the unit. This station license is granted only to citizens of the United States 18 years of age or older, but persons other than licensees, including those under 18, may operate units under the supervision of the licensee.

In many respects, the Mark VIII represents a significant departure from ordinary citizens' band radio design. Its low, slim silhouette (only 3½ inches high) facilitates installation in extremely cramped locations permitting under-the-dash mounting even in today's small cars.

- 9 crystal controlled transmit and receive channels
- Tuneable receiver for reception of all 23 CB channels
- Excellent voice reproduction—high intelligibility
- Built-in ac power supply
- Separate 6 or 12-Volt dc power supply (optional) for mobile installation
- 5 Watt* transmitter—Nominal output 3 Watts or better
- Highly selective superheterodyne receiver with one rf and two if amplifiers
- Fully adjustable squelch circuit to quiet receiver
- Improved Automatic Noise Limiter to reduce effects of ignition and similar interference
- Automatic Volume Control: affords maximum gain of weak signals and limits strong ones
- Unique "message monitor" feature: Calls from nearby stations can be heard even with volume control turned all the way down

One of the more unique features of the RCA MARK NINE is the combination "S" meter and relative RF output meter which provides the operator with a relative indication of the strength of the incoming signal ("S") and of the RF signal he himself is transmitting ("EO"—output voltage). Another important new feature incorporated in the RCA MARK NINE is the Spotting switch. Use of the "spot" feature permits precise manual tuning of the receiver to any one of the transmit crystal frequencies. This feature has particular value in operations in which a number of vehicles are employed, each operating on a different frequency.

For applications where an additional speaker is required at some remote location, the RCA MARK NINE also incorporates an external speaker jack. Since use of the external speaker does not make the speaker in the unit inoperative, incoming calls can be heard at both locations.

BANTAM JACK PANELS

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only $\frac{1}{2}$ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks in a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a $1\frac{1}{2}$ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

BANTAM JACK PANEL SPECIFICATIONS

Panel: Aluminum alloy, extruded, $1\frac{1}{2}$ inches wide for standard 19 inch rack mounting.

Jack Mounting: Four molded plastic inserts, each provides for 24 jacks. Pairs of jacks on $\frac{1}{4}$ inch centers. Double row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.

Panel mounting: Mounting brackets are integral part of panel.

Designation Strip: Extruded clear plastic.

Panel Finish: Anodized, Black.

Only 3¼ inches high, 2½ inches wide, and comes as one assembled piece that is mounted in seconds. Standard models available for 40, 60, 80 and 100 connections. Other configurations can be custom made in production quantities.

ONE CONNECTION EVERY FIVE SECONDS

These are solderless, wrapped wire connections. In less than 5 seconds the most inexperienced operator can slip on a wire and make the most positive connection imaginable. He can make 100 connections in less than 8 minutes using any commercially available wrapping tool.

RUGGED, RELIABLE CONNECTIONS

These solderless connections are mechanically strong and have less tendency to break due to handling or vibration than soldered connections. You get clean, metal-to-metal gas tight contact between wire and terminals with permanently low electrical resistance.

The block and fanning strip are molded of durable, impact rubber modified acrylic plastic well known for its dimensional stability, strength and resistance to shock under adverse environmental conditions. Terminals are hard brass and plated for maximum conductivity.

Since the development of these new terminal blocks in 25 years of experience in meeting rigid military specifications on a wide variety of devices. This is your assurance of top quality performance and long dependable service life.

Numbers and letters provide easy terminal identification. Mounting studs are steel cadmium-chromate plated to withstand 50 hours of salt-spray.

CUT COSTS MANY WAYS

Not only do these new terminal blocks save space and weight, they cut production costs.

Wrapped connections depend more on the wrapping tool — less on the operator. The result: the most positive, most uniform connections obtainable — with less need for inspection. The operator makes more connections with far less fatigue.

Finally, you eliminate expensive solders, connectors, messy soldering, spilling solder splashes, clippings, and deceptive cold-soldered joints.

Amphenol®

RACK & PANEL CONNECTORS

**BLUE *Ribbon*® CONNECTORS**

The Amphenol gold-plated ribbon connector provides more contact mating surface than any connector of its type. Applying the principle of the wedge, ribbon contacts exert a continuous flexing action against each other while mated, providing unusually low contact resistance. The Blue Ribbon® contact is self-wiping for reliability throughout its long life, and is available with 8 to 32 contacts. Cable to panel versions are also available.

***Micro* RIBBON® CONNECTORS**

Amphenol's Micro Ribbon® connector is a miniature version of the Blue Ribbon connector. It features 14 to 50 contacts, low contact resistance, self-wiping action and miniature size.

***Min* Rac 17® CONNECTORS**

Amphenol's Min-Rac 17® connector is highly suited for saving needed space for proper ventilation, component mounting, or chassis size reduction. Mounting depth is less than most "shell-less" rack-and-panel connectors. It provides up to 50 Poke-Home® terminals in half the insert space required for standard rack-and-panel connectors. Poke-Home contacts are available in either crimp or solder version.

**HEX-TYPE CONNECTORS**

Amphenol provides a complete family of miniature rack-and-panel and cable-chassis connectors for interconnection in a wide range of applications. Hardware and contacts are interchangeable. Bodies are molded of diallylphthalate; gold-over-silver contacts will not tarnish or corrode and can be soldered without pre-tinning, even after long storage. All hardware is nickel-plated solid brass.

**126 SERIES CONNECTORS**

The 126 Series is a versatile group of connectors available in 11, 15, and 20 contact versions—with or without protective can and cable clamp. Rated at 900 volts RMS, 60 C at sea level. Bodies are mica-filled phenolic; contacts are gold-plated.

**94 SERIES POKE-HOME® CONNECTORS**

Amphenol's 94 Series rack-and-panel connectors feature Poke-Home contacts. Aluminum shells are cadmium plate, chromate treated. Useful for any rack-and-panel application, the 94 Series is especially valuable where circuits must be changed frequently without the connector. Poke-Home contacts can be wired and then inserted into the mounted or unmounted connectors in any desired position.

**MICRO-MINIATURE CONNECTORS**

Amphenol provides three additional complete series of subminiature connectors designed for modules, stick-circuitry, thin style printed circuit boards, and other micro-miniature applications. Use of the Micro-Mod®, Micro-Min® Series, and Micro-Edge® connectors is limited only by the imagination of the design engineer.

**PRINTED CIRCUIT CONNECTORS**

Amphenol's printed circuit connectors are available with ribbon or tuning fork contacts. The broad selection of contact tails represents the most complete line in the industry.

**WIRE-FORM POKE-HOME® CONNECTORS**

Unique contact design in Amphenol's Wire-Form connectors places the spring tension member in the pin contact. The Wire-Form connector combines Poke-Home contact versatility with center to center spacing as close as .075. Four complete styles are available:

Mighty-Mite®—cable-to-panel and cable-to-cable application; 7 to 61 contacts.
Tiny Tim®—module and rack-and-panel application; 5 to 33 contacts.
Micro-Rac®—rack-and-panel, cable, and module application; 52 to 104 contacts.
Wire-Form Strip—permits cutting and stacking in unlimited shapes.

POWER CONNECTORS

**MS CONNECTORS**

Amphenol builds MS connectors to the latest issue of MIL-C-5015 Specification. They are designed, manufactured, and approved under this specification for the armed forces, and are ideal for commercial and industrial applications which require the same versatility and dependability.

**MS—E/R CONNECTORS**

Amphenol's resilient dielectric MS connector meets all environmental requirements of the latest revision of MIL-C-5015. Its unitized grommet eliminates the use of bulky cable clamps, and results in a considerable reduction of length and weight in relation to standard MS connectors.

**69 POKE-HOME® CONNECTORS**

Amphenol Poke "R" solderless connectors provide all the lightweight environmental-resistant features of MIL-C-5015s "R" Class with two important additions: Poke-Home contacts and superior environmental performance. Incorporation of these two features make Poke "R" a highly preferred MIL-C-5015-type connector.

**48 SERIES—MIL-C-26500 (USAF)**

Meeting or exceeding all MIL-C-26500 requirements, Amphenol's 48 Series combines miniature environmentally-resistant construction and Poke-Home crimp type contacts. MIL-C-26500 connectors perform with utmost reliability in temperatures of -55°C to $+260^{\circ}\text{C}$, with no de-rating up to 360,000 ft. Available with threaded and bayonet coupling.

**67 SERIES MINNIE® CONNECTORS**

Amphenol 67 Series MinnieE connectors are quick-disconnect, multi-contact, miniature bayonet types. MinnieE connectors feature inclined stainless steel slots and spring loaded coupling rings. A bright orange visual indicator signals full coupling. The 67 Series has a wide variety of shell styles with environmental capability. Receptacles are available in hermetics.

**89 SERIES CONNECTORS**

Rugged and completely leakproof, Amphenol 89 Series connectors provide efficient and dependable service even when entirely submerged in mud, ice, water, or mire. They are used extensively in missile ground-and-support systems, radar antenna installations, oil well and digging equipment, and other hard-service applications. Available in more than 70 insert configurations with 2 to 52 contacts.

**115 SERIES CONNECTORS**

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 contacts and are nominally rated at 750 volts RMS, 60 CPS at sea level. They provide maximum space efficiency for all applications where a large number of circuits must be broken quickly and conveniently. The vise-action of the screw lock permits a quick-make quick-break switching action of all contacts.

**MINIATURE "AN" CONNECTORS**

Compact, efficient Amphenol 165 Series connectors are miniature versions of standard AN/MS types. Because of their weight and space saving design they are widely used in aircraft and miniaturized electronic equipment. 165 Series connectors use bayonet couplings, and are both pressure-proof and completely waterproof—mated or apart. Hermetically sealed, 182 Series connectors mate with connectors of the 165 Series.

**172 SERIES HERMETIC CONNECTORS**

Amphenol 172 Series hermetic receptacles use an improved hard-glass compression seal with high visibility "Identoseal" contact identification. Both insert faces have ceramic white marking permanently fused to the dark brown glass. Receptacles mate with MIL-C-5015 MS plugs. The 172 Series is available in round flange, square flange, hex flange, and flangeless shells.

TUBE SOCKETS, AND MICROPHONE CONNECTORS

"S" TYPE TUBE SOCKETS

Amphenol "S" type tube sockets mount quickly and easily without screws or rivets by means of a patented "Retainer Ring Mounting." Sockets position to line up contacts for convenient wiring. The "S" type tube socket may be used with "Pin Caps" to make high-quality, low-cost cable connectors. Available also in mica-filled phenolic.

"MIP" SOCKETS

Amphenol's famous "MIP" socket (Molded-in-Plate) features Bakelite dielectric and 4 to 20 contacts.

"CP" PLUGS

Amphenol "CP" plugs also mount simply through use of the patented "Retainer Ring Mounting." "CP" plugs are ideal as chassis connectors with plug-in units and are available optionally in mica-filled phenolic. They also adapt to cable application when used with steel caps.

110/220 VOLT PLUGS & RECEPTACLES

Amphenol's 110/220 volt plugs and receptacles may be panel or cable mounted. Available with rubber grommeted or cable clamp type shields, recessed or raised mountings, two or three contacts.

110 VOLT GROUND PLUGS & RECEPTACLES

Amphenol's 110 volt ground plugs and receptacles meet latest UL requirements. The 160 Series may be panel or cable mounted.

MIKE CONNECTORS

Designed for use with shielded microphone cables, Amphenol's family of microphone connectors are available in several series and include "Quik" Microphone Connectors with quick-button disconnect, 75 Series, single and double contact 80 Series and its companion, 3 and 4 contact 91 Series.

RELAY SOCKETS

Amphenol relay sockets are available in a broad range of contact styles and sizes with up to 20 contacts.

MILITARY TIP JACKS

Amphenol military tip jacks feature a recessed silver-plated contact for top durability and high performance. Tip jacks formerly were manufactured by the I.P.C. division.

Amphenol®

RF PRODUCTS

**83 SERIES UHF CONNECTORS**

Amphenol's UHF 83 Series consists of both small and large single and twin contact connectors. All are low-cost, general purpose connectors of non-constant impedance. They operate satisfactorily at frequencies up to 200 megacycles, can be used with caution up to 500 megacycles, and can be used at peak voltages up to 500 volts.

**BNC SERIES CONNECTORS**

Amphenol Series BNC connectors for small coaxial cables consist of non-constant impedance types and an improved constant 50 ohm impedance type. All incorporate quick-connect and disconnect bayonet-lock coupling and are weatherproof. BNC connectors are small, lightweight, and are recommended for quality, low-voltage applications, both indoors and out.

**SERIES N CONNECTORS**

Completely weatherproof Series N connectors are the most popular constant impedance connectors for medium size coaxial cables. They can be used throughout microwave frequencies with minimum line unbalance or increase in standing-wave ratio. Although Series N 50 ohm and 70 ohm connectors do not mate, 70 ohm cables may be used with 50 ohm Series N connectors where impedance matching is not critical.

**SUBMinax® RF CONNECTORS**

Amphenol's SubMinax RF connector family provides the most complete subminiature line available from one source. The SubMinax 27 Series is gold-plated and uses a MIL-C-22557 screw-on and push-on coupling. The SubMinax 5116 is silver-plated and mates with competitive non-MIL-C-22557 screw-on, push-on coupling types. The 5116 contains only five components, saving as much as two-thirds assembly time.

**BETWEEN SERIES ADAPTERS**

Amphenol can provide the most complete line available of between-series adapters.

**OTHER RF CONNECTORS**

Types C, HN, LC, BN, TNC, LN, SKL, MB, MC, SM, TWINAX, MHV, and Terminations, as well as a variety of modifications, make up the complete Amphenol/i.p.c. line.

Designers can create functional chassis layouts.

Simplifies repairing. Resolder over and over again. Allows picking up test points very easily.

FEATURES A PERMANENT BOND BETWEEN METAL AND CERAMIC, NOT JUST AN ADHESION, BUT "FIRE TO PREVENT METAL FROM LOOSENING.

ELECTRONIC ENGINEERS who insist on high standards in manufactured products have found these new ceramic terminal strips as an answer to their "quality" problem. They are especially suitable for experimental design where components need to be resoldered and removed. Fired copperplate on ceramic is silverplated and tinned to facilitate soldering of components and leads. They are superior to the commonly used temperature afflicted plastics. The high temperature qualifications allow these ceramic strips to withstand excessive heat. The uniform manufacturing of the terminal strip gives the row after row assembly a neater appearance and adds a quality look over Standard 2-56 thread studs are made extra long to be cut off at any required dimension. Ideal for long life, low resistance. Recommended for prototypes and production use.

SUB-MINIATURE TEFLON TERMINALS

NEW SUB-MINIATURE TEFLON TERMINALS

W SUB-MINIATURE TEFLON* terminals provide instant mounting without extra hardware of any kind because of the exceptional properties of virgin Teflon.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (500-2000 v/mil, s.t.), continuous service -450°F to plus 500°F, unaffected soldering, chemically inert, damage resistant, water repellent.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Size: 1. Punch or drill the hole to a diameter that is .012" less than the

diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040" or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly — cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry.

Your inquiries invited for sizes not shown here.

"JONES" 500 SERIES BARRIER TERMINAL BLOCKS

Barrier type terminal blocks designed for applications where electrical and mechanical performance requirements are especially critical. Closed bottoms eliminate additional insulating strips. Knockouts are molded into the base so that "Y" terminals can be accommodated if desired. Heavy construction adds strength to strip minimizing warpage and shrinkage. Top-mounted marker strip available.

540 TERMINAL BLOCKS

Terminals are mounted on $\frac{3}{4}$ " centers with 5-40 binder head screws. Size, $1\frac{1}{4}$ " w. x $1\frac{1}{4}$ " h. Creepage distance, $\frac{1}{2}$ ". Rating: 2300 v. rms, 15 amps.

Sockets . . . exclusively!

ELCO'S PATENTED SOCKET FEATURE

CONFORMING TO MIL-S-12883-A, our exclusive, patented
SOCKET design will be found in all our 7-Pin and 9-Pin Base-
Shield and Saddle Type Sockets (except Ceramic). This in-
genious design provides a positioning-key at the top of the
socket which permits the tube to "find" its correct insertion
position without loss of time or pin damage. And by virtue of
the E-Z MATE* feature, tube locations may now be designed
into "blind" or formerly inaccessible positions.

ELCO VARICON* Miniature Printed Circuit Connectors

CONNECTOR BODY is constructed of a one-piece molding with guides integrally molded in the end sections of the connector.

MOUNTING is accomplished in two ways:

Series 5006 — End sections have projections for mounting in rectangular cutouts in metal panels as used in ELCO's VARIPAK* card cages. All connectors can be secured simultaneously by a common metal bar screwed to the connector panel.

Series 5007 — End sections with guides and mounting holes similar to Series 7001 for direct mounting to chassis.

*CONTACT CONFIGURATION is a single row of contacts on .200 spacing.

POLARIZATION is accomplished simply by insertion of a polyethylene insert. No loss of contact positions is incurred. Insert can be supplied loose or inserted in specified position at ELCO. No. 50-5006-3414.

Request Bulletin 00-5006 for other variations.

ELCO VARILOK* Crimp-Type Printed Circuit and Rack-and-Panel Connectors

The ELCO VARILOK* contact is the most recent development in applying the reliability of ELCO VARICON* Contacts to advanced self-locking, crimped-wiring applications.

The ELCO VARILOK* contact may be crimped to the wire independently, stocked until needed, then inserted into the insulator. Insertion is accomplished by merely inserting contact into any insulator hole location. May be extracted with equal facility by the use of an extraction tool. The ELCO VARILOK* contact locks into position using a spring

lance. It will not twist, turn, or bend out of alignment; and has passed many stringent commercial and military pull-out tests.

ELCO VARILOK* contacts are sold loose for usage where quantities are relatively low, and for repair and/or replacement if ever needed.

ELCO VARILOK* contacts are also available in reels containing rack contacts for economical long-runs of larger quantities, where automatic crimping machines are used.

New Series 7021-7022 and 7023-7024 ELCO VARICON® All-Molded, Double Tier Miniature Connector Plugs

New, one-piece molded body provides full protection for lower and upper tier printed circuit module card contacts of the 7000 Series family.

One fully assembled unit replaces lower and upper card contacts supplied on removable plastic strips. High rigidity of the all-molded body minimizes card warpage at the point of connection for perfect mating with receptacle.

ELCO Contacts, sold under the trade-mark VARICON, are securely bonded into slots of the insulator, thereby maintaining precise spacing between contacts for perfect mating, resulting in low insertion and withdrawal values, low wear, low contact resistance and long life.

Lower and upper tier contacts are each equipped with only one leg, instead of double legs, thereby:

- Reducing cost of producing module cards, because only two rows of holes must be drilled or punched instead of four.
- Simplifying the printed circuit layout with the result of larger distance between adjacent printed circuit pads.
- Reducing cost of staking because lower and upper tier contacts can be staked simultaneously instead of each row individually.

One solid unit with lower and upper tier contacts bonded in position reduces assembly cost. Connector plug can be mounted directly to printed circuit module, and at customer's option staked and soldered in place or merely dip-soldered without staking. Assembly time to remove plastic strip is omitted.

Plugs are supplied two ways:

- Type 7021 with mounting ears to be used with connectors of the 7000 Series type without molded guides.
- Type 7022 for use with 7000 Series connectors with molded-on guides.

CANNON AUDIO PLUGS for low level circuit applications

Cannon Audio Plugs are designed for use on audio/video and other low level circuit applications in the electronic/industrial fields where reliability, quiet operation and the elimination of mechanical interference is necessary. Some common uses are: microphones, tape recorders, medical instruments, cameras and test instrumentation computers.

PLUG SERIES

XLR incorporates the most advanced audio/electronic design concepts. It is small and compact, it features resilient insulators on the socket side plus resilient ribs for shock protection and quiet operation. Shells are zinc (receptacles), steel or zinc (plugs), with satin nickel finish. Insulators are rigid molded plastic (pin side), resilient polychloroprene (socket side). Contacts are brass, silver plated. Coupling is by the latch-lock method.

FEATURES

• QUIET OPERATION

Thick zinc cross sections for shell strength, plus resilient insulators and resilient ribs on the socket side, insures elimination of mechanical interference from shock.

• EASY TO WORK WITH

Finger grips for positive handling. Integral cable clamp with two clamping positions for positive grip on cable sizes from 7/32 to 5/16 of an inch. Large internal space for ease of wiring.

**CONNECTING CABLES**with *Lenite***MOLDED PLUGS and JACKS**

Lab-Tronics' molded cable construction is the accepted standard for appearance, durability, and handling ease. L-Ts' molded connectors are waterproof; no strain on soldered connections; eliminate need for unsightly external clamps. Molded plugs and jacks are attractive gray, to match cable. Cables are soldered to connectors before molding, assuring completely noise-free operation; highest quality, low-

capacitance type, insuring minimum loss. Jacket is smooth silver-gray non-contaminating high temperature plastic. Plugs and jacks of highly polished brass, machined to close tolerances, then double plated. Individually packaged in strong, clear plastic bags or attractive boxes with complete description and length of cable printed on the label.

SHIELDED**SHIELDED CONNECTING CABLES WITH MOLDED PHONO PIN PLUGS AND MOLDED PHONO PIN PACKS**

The silver gray cable is of high quality, low-capacitance type for minimum loss. Used for interconnecting tuners, pre-amps, amplifiers,

Micro-Gator

Micro-Gator with insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do..... on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. It offers the speed, free-handed ease and convenience associated with other Mueller alligator clips. The Micro-gator is truly small (takes 30 to weigh an ounce!) including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample ½" jaw spread. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending

No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 13/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

HOW TO DETERMINE PART NUMBERS

To arrive at the correct part number, for a Terminal Strip, refer to the drawings above and select the LETTERS or NUMBERS of the terminal, mounting lug or bracket desired; indicate them in the sequence desired, reading from left to right. May be supplied with as many as 16 lugs on a strip.

For example: In the photograph of terminal strips shown above, the first is "WWSWW." This means that the first two lugs are "W," the mounting lug is "S" and then two additional "W" lugs.

In the second strip, "131," the first lug is "1," the mounting lug is "3" and the last lug is "1".

MINIATURE

Miniature Terminal Strips are recommended for all applications where space is a factor. These strips are made of the same materials as the STANDARD Terminal Strips described on the opposite page except smaller. Strips are 1/16" by 5/16"

wide NEMA grade XP laminated phenolic with brass lugs securely eyeletted in position. Lugs are supplied in any of the finishes used on the STANDARD series with the insulation likewise available in a choice of materials and finishes.

Mounting Holes .093 are standard. .125 mounting holes are available when requested.

HOW TO DETERMINE PART NUMBERS

The identical system is used to determine the terminals, mounting lugs and brackets for the miniature series of terminal strips with one notable exception: in each instance the prefix "M" ap-

pears before the part number to designate miniature terminal strip. The LETTERS and NUMBERS are selected from those appearing on this page. May be supplied with 24 lugs on a strip.

When importance is placed on space saving, Sub-miniature tie lug strips are selected. Indicate type desired.

MOLDED TERMINAL BLOCKS

.....905 SERIES • FLEXIBLE.....

Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyester material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.

The shortest distance between the live parts of Type No. 905 Terminal Block is $\frac{3}{8}$ ". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at 25 amperes.

Connection of the conductor to the block is simple. No solder is required. Insert the conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures $3\frac{3}{4}$ " long, $\frac{5}{8}$ " wide, $\frac{1}{2}$ " high and $\frac{11}{32}$ " between terminal centers. It may be cut to smaller sizes as required.

.....900 SERIES • PUSH BUTTON.....

Like Type No. 905, the No. 900 Terminal Block is solderless, and is molded of black nylon plastic. The push buttons are molded of red nylon plastic.

These terminal blocks have extremely high dielectric properties and are approved to resist 380 volts between terminals.

Connection of the conductor is extremely fast. Press the red button and insert the wire. Release pressure for locking. The beryllium copper contacts are molded into the block.

Type No. 900 Terminal Block is available for 12 connectors. It may be cut to smaller size if required.

TELLURIUM COPPER LEADS FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed to work with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper plated spade lugs cold-staked to multi-stranded

12 gauge CUPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded CUPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts. (Less than $0.1 \mu\text{V}/^\circ\text{C}$).

NOTES

1. Teflon should protrude .040" min. below chassis.
2. Clearance between punch and die should be held to normal shop tolerances governed by material and thickness and type.
3. Predrawn hole size is governed by material type and thickness.
4. Die diameter is punch diameter plus double the metal thickness, tolerances being consistent with normal shop practice.

INSTALLATION PROCEDURE

Simplest, fastest, most economical terminal installation known, with practically no restriction as to chassis material and thickness.

Inexpensive insertion tool available from Sealectro, facilitates installation. Tool fits any drillpress (power off) or hand arbor press, to hold given PRESS-FIT Terminal. Centered over chassis hole, and with applied pressure, the PRESS-FIT Terminal slips into the hole for a rigid permanent, trouble-free installation. Just PRESS-FIT — that's it! In four easy steps:

(1) PUNCH OR DRILL HOLE . . .

.013" ± .002" less than diameter of terminal section (dia. "G" in tables) passing through chassis. Minimum protrusion of bushing passing through chassis, .040". Maximum thickness of chassis .125"; for greater thickness, ask for our recommendations. Countersink from breakout or die side of chassis (not from punch side).

(2) COUNTERSINK ENTRANCE EDGE . . .

Use 60° countersink when chassis thickness is .040" and over; use 82° countersink when chassis thickness is less than .040". This enables centering of terminal in hole and prevents scoring the Teflon bushing. Depth and maximum diameter of countersink is determined by thickness of chassis stock and bushing's major diameter.

(3) INSERTION TOOL . . .

Insertion tool is placed in chuck of drillpress (power off) or hand arbor press. Terminal is held by tool, leaving assembler's hands free to index and center chassis hole underneath tool. Proper pressure is applied and released just as soon as major diameter of terminal seats itself.

(4) PERMANENT INSTALLATION . . .

PRESS-FIT Terminal is now permanently secured in place.
